Declaration of Conformity

Regarding DOT, ADR/RID & UN2800 standard, class 8, sub paragraph 3, relative to Wet, Non Spillable Electric Storage Batteries, UNIBAT S.A declares that UNIBAT General Use AGM series of 6V, 8V & 12V models 1.3 to 260AH are Sealed Valve Regulated Lead Acid batteries (VRLA) with Absorbed Glass Mat (AGM) electrolyte.

As such, they have been tested according to Vibration, Pressure Differential and Attitude tests stipulated in Packing instruction 806 and special provision A67 (pg. 25) of the IATA (International Air Transport Association) and ICAO (International Civil Aviation Organization) Dangerous Goods Regulation.

They also meet all IMDG (International Maritime Dangerous Goods) regulations.
All tests samples passed each and everyone of these tests.

Being such batteries of the non-spillable type, the electrolyte will not flow from a ruptured or cracked case and there is no free liquid to flow and when packed for transport, terminals are protected from short circuit.

We can therefore categorically state that all above mentioned batteries are not to be considered dangerous goods and can readily be safely transported by Air, besides of Road and Sea

UNIBAT S.A
